

CI VII levels faster than 5.00 ns

16 of 46 levels, in 9 fine-structure multiplets · 16 inside the 1 – 1000 ps window · energies above the ground state at 0 eV

1 – 1000 ps (target window) outside it, still under 5.00 ns

$\tau = 1/\Sigma A_{ki}$ over every known channel · ↓ = strongest decay channel
