

O I levels faster than 5.00 ns

5 of 580 levels, in 3 fine-structure multiplets · 0 inside the 1 – 1000 ps window · energies above the ground state at 0 eV

— 1 – 1000 ps (target window) — outside it, still under 5.00 ns

$\tau = 1/\Sigma A_{ki}$ over every known channel · ↓ = strongest decay channel
