

Sr II levels faster than 5.00 ns

4 of 70 levels, in 3 fine-structure multiplets · 0 inside the 1 – 1000 ps window · energies above the ground state at 0 eV

1 – 1000 ps (target window) · outside it, still under 5.00 ns · $\tau = 1/\Sigma A_{ki}$ over every known channel · ↓ = strongest decay channel
